iFleon CRM requirements

Oct 13, 2026 · @nikhil

An internal CRM for iFleon: consultants log leads and meetings, a manager reviews their work, and admin manages users, settings and documents. Only these three roles log in; there is no client access and no website management.

Roles and permissions

Three roles, each seeing only what they need. Admin has full control, the manager reviews consultant work, and consultants handle only their own leads.

Capability	Admin	Manager	Consultant
Create and disable users	Yes	No	No
Dashboard settings, themes, company details	Yes	No	No
Create and assign projects	Yes	Yes	No
Add and edit own leads	Yes	Yes	Yes
View all leads (consultants edit only their own)	Yes	Yes	Yes
Review, comment on and approve leads	Yes	Yes	No
Team reports and follow-up overview	Yes	Yes	Own only
Activity and audit log	Yes	Read only	No

Projects and lead log

A project groups the work for one client or campaign. Consultants add one lead line per contact, and the manager reviews them.

Field	Type	Notes
Contact person	Text	Name of the person contacted
Phone number	Text	Validated, click to call

Field	Type	Notes
Business name	Text	Searchable
Location	Text	City and area; map link later
Status	Dropdown	New / Contacted, Interested / Follow-up, Proposal sent / Negotiation, Won / Lost
Follow-up date	Date	Drives reminders and the overdue list
Notes	Long text	Call summary, requirements heard
Consultant	Auto	Set from the logged-in user
Manager review	Dropdown	Pending, Approved, Needs changes, plus a comment
Final deal amount	Number	Required when the status is Won
Start date	Date	Required when the status is Won

Every edit is timestamped, so the manager can see who changed what and when.

Admin dashboard and settings

The admin controls users, settings, themes and company details from one place. The CRM is for iFleon's own sales work and does not manage client websites.

- **Users:** invite, disable and reset passwords; assign roles.
- **Appearance:** choose a colour theme for the CRM, switch dark mode, and create themes with AI.
- **Company settings:** iFleon name, logo pair, address and contact details.
- **Master lists:** lead statuses, lead sources, lost reasons, tags and the price list.
- **Templates:** quotation and proposal layouts and standard wording.
- **Dashboard home:** leads by status, overdue follow-ups, wins this month, consultant activity.

Standard scope list for quotations

This is a master list kept in the admin panel, so the admin can edit, add or remove items. The example below is for pre-owned car dealer websites, which iFleon sells today. The CRM only records the sale; the websites are built elsewhere.

Module	What it does
Car inventory	Each car holds make, model, variant, year, price, kilometres, fuel, transmission, owners, colour, registration state, insurance validity, photos and status (Available, Booked, Sold)
Search and filters	Visitors filter by brand, price range, year, fuel type and transmission
Car detail page	Photo gallery, specifications, price, call and WhatsApp buttons, share link
Enquiry and test drive form	Name, phone, chosen car and preferred time
EMI calculator	Monthly instalment from price, down payment, rate and tenure
Sell or exchange your car	Form where visitors describe the car they want to sell
Dealer pages	Showroom address, map, opening hours, about us, customer reviews
Offers and featured cars	Home page banners and highlighted stock
SEO and sharing	Page titles, descriptions and share previews for every car

These modules form the standard scope that quotations and proposals draw from.

Each quotation and proposal picks the modules the dealer is buying from this list, so the scope and price list stay consistent.

Meeting notes (MoM)

Every lead record can hold any number of meetings. Notes are typed by the consultant, never auto-generated, and the whole section is optional.

Field	Notes
Meeting date and time	Defaults to now
Type	Call, visit or video meeting
Attendees	Free text
Minutes	Typed rich text, optional
Next action	Optional; can set the follow-up date directly
Added by	Set from the logged-in user, with edit history

The lead page shows meetings as a timeline, newest first, so the manager sees the full conversation history in one place.

AI features

The CRM talks to AI through one provider-agnostic layer, so you can use free keys from several open-source model hosts and switch without code changes. Gemini is just one option.

How the provider layer works

- Most free hosts (Groq, OpenRouter, Together, Mistral, Hugging Face, or local Ollama) accept an OpenAI-compatible request, so one adapter covers them.
- Admin settings hold a list of providers: name, base URL, model, API key and priority.
- If a provider hits its free rate limit or fails, the CRM tries the next one in the list automatically.
- Keys are stored encrypted on the server and never sent to the browser.
- Free tiers and limits change often, so check each provider's current terms before relying on one.

AI theme creation

1. Admin describes the look in words ("clean and professional, deep blue, rounded cards") or uploads the iFleon logo.
2. The AI returns a structured theme: colours, fonts, corner radius and spacing, never raw code.

3. The CRM checks it against a fixed schema and contrast rules, then shows a live preview of the dashboard.
4. Admin tweaks and saves it. Any user can then pick it as their theme, in light or dark mode.

Other AI helpers (all optional, triggered by the user)

- Suggest a follow-up message for a lead, ready to edit before sending.
- Summarise a lead's notes and meetings into a short brief for the manager.
- Tidy typed minutes into clear points. This is a button the consultant presses, not automatic.
- Flag possible duplicate leads.

Analytics dashboard

Each role sees the numbers that matter to them, with a date range filter on every view.

Audience	What they see
Admin	Leads and wins by month, conversion rate, leads per project, AI usage per provider
Manager	Leads per consultant, status funnel (New to Won), overdue follow-ups, meetings held, leads awaiting review
Consultant	Own leads by status, today's follow-ups, meetings this week, personal win rate

Charts: a funnel for status stages, bars for consultant comparison, a line for leads over time, and a map or list of leads by location. Everything exports to Excel or PDF.

Branding

The iFleon company logo comes in two files, and the CRM uses each in a fixed place. This is the company logo, not a separate CRM logo.

File	Used for	Notes
Icon (square "iF" mark)	Browser favicon, collapsed sidebar, login badge	Export as PNG at 512 px, plus 32 px and 180 px versions
Horizontal logo (icon with "IFLEON" text)	Header, login page, exported reports	Prefer SVG or a transparent PNG

A Branding page in admin settings lets the admin replace both files later.

Please send both files as separate images (the screenshot is only a preview), ideally with transparent backgrounds.

Extra features and scope

All the high-value features are now in scope, along with the ones you picked from the next tier. The lead capture form waits for a later release.

Feature	Decision	Phase
Follow-up reminders and a "due today" list	Included	2
Lead search and filters	Included	2
Tags and saved filters	Included	2
Excel import and export of leads	Included	2
Audit log (who changed what and when)	Included	2
Lead source field	Included	1
Click-to-call and click-to-WhatsApp buttons	Included	1
Tasks and to-dos with due dates	Included	2
Lost-reason dropdown, used in analytics	Included	2
File attachments on a lead (brief, proposal, screenshots)	Included	2
Manager feedback comments and review inbox	Included	2

Feature	Decision	Phase
Dark mode	Included	1
Installable mobile web app (works like an app on a phone)	Included	2
Quotations as PowerPoint, with AI help	Included	5
Proposals as PDF, with AI help	Included	5
Deal value and expected close date	To confirm; needed for quotes and forecasts	3
Lead capture forms for client websites	Deferred	Later

Still on the later list: consultant targets and leaderboard, two-factor login, a daily summary email to the manager, and automatic backups with one-click restore.

Quotations and proposals

From any lead, a consultant can generate a quotation as a PowerPoint file and a proposal as a PDF, both with iFleon branding. The customer details come from the lead record. You provide the prices and terms. AI writes only the descriptive text, and never invents amounts.

How it works

1. Consultant opens a lead and chooses New quotation or New proposal.
2. The CRM fills in customer name, business, phone and location from the lead.
3. Consultant adds the line items, amounts and terms, or picks them from a saved price list.
4. AI drafts the wording (project summary, scope description, benefits), using the lead's notes and meeting minutes. The consultant edits it.
5. The CRM builds the file from an iFleon template, saves it on the lead as a numbered version, and offers a download.
6. Status moves through Draft, Sent, Accepted or Rejected. Rejected feeds the lost-reason dropdown.

What goes inside the quotation (PowerPoint, short and price-focused)

Slide or section	What to place there	Comes from
Cover	iFleon horizontal logo, "Quotation", quotation number, date, valid-until date	CRM
Customer details	Contact person, business name, phone, location	Lead record
Project summary	Two or three lines on what will be built	AI draft, consultant edits
Scope and deliverables	Pages, features, theme, hosting, training	You, AI polishes wording
Pricing table	Item, quantity, rate, amount; subtotal, discount, total	You
Payment terms	Advance percentage, milestone payments, mode of payment	You
Timeline	Start date and delivery days per phase	You
Terms and conditions	Validity, revisions included, ownership, cancellation	Saved template
Contact and acceptance	Consultant name and phone, signature or acceptance line	CRM

What goes inside the proposal (PDF, detailed and persuasive)

Section	What to place there	Comes from
Cover page	Logo, client name, proposal title, date, version, prepared by	CRM
Executive summary	The client's problem and iFleon's answer in one page	AI draft
Understanding of your needs	What the client told us, from meeting minutes	Lead notes, AI draft
Proposed solution	Website or system described in plain language	AI draft, you edit

Section	What to place there	Comes from
Scope of work and deliverables	Detailed list of what is and is not included	You
Features and modules	Chosen modules, pages and integrations from the standard scope	Module list
Timeline and milestones	Phases with dates	You
Investment	Price summary, payment schedule; refers to the quotation	You
Assumptions and exclusions	What the client must provide; what costs extra	Saved template
Support and maintenance	Warranty period, support hours, renewal costs	You
Terms and next steps	Terms, how to accept, contact details	Saved template

Admin controls for this feature

- Price list: services and standard rates that consultants can pick from.
- Templates: edit the quotation and proposal layouts and all standard wording (terms, assumptions, support) from the admin panel, with no code change.
- Numbering: for example IFL-Q-2026-0001 for quotations and IFL-P-2026-0001 for proposals.
- Company details: address, phone, email and website. No GST or UPI details appear on documents.
- Permissions: manager approval before a quotation above a set amount can be marked Sent.

iFleon logo in every generated document

- Cover: the horizontal logo, large, top left of the quotation slide and the proposal cover page.
- Every other page or slide: the horizontal logo small in the header, or the square icon if space is tight.
- Footer: company name, tagline ("Intelligent Frameworks. Powerful Execution."), address, phone, email and website.

- Both logo files come from the Branding page, so changing the logo there updates all future documents.
- Needed from you: the logo as separate image files (SVG or transparent PNG, horizontal and icon). The screenshot is too low quality to print.

Recommended tech stack

I recommend Next.js with Supabase. Role-based screens, server-side login checks and a dashboard fit well in one codebase, and relational tables suit users, projects and leads.

Layer	Choice	Why
Frontend and backend	Next.js (React, TypeScript)	One codebase, easy role-based pages
Database	Supabase (managed PostgreSQL)	Database, file storage for attachments and logos, and reporting queries in one service
Authentication	Supabase Auth with a role field	Secure login, password reset, and role rules enforced in the database
UI	Tailwind CSS and a component library	Fast, consistent dashboard
Hosting	Vercel or a VPS for the app, Supabase for data	Simple to deploy and back up

If your team already knows PHP, Laravel can also connect to Supabase's PostgreSQL database.

Build phases

1. **Phase 1, core CRM:** login, three roles, user management, projects, the lead log with statuses, follow-up dates and lead source, click-to-call and WhatsApp buttons, iFleon branding, dark mode.
2. **Phase 2, daily work tools:** meeting notes, tasks with due dates, reminders, search, filters, tags and saved filters, lost-reason dropdown, file attachments, manager review and feedback inbox, audit log, Excel import and export, installable mobile web app.

3. **Phase 3, analytics:** role-based dashboards, funnel, consultant comparison, lost reasons, deal value forecast, PDF and Excel reports.
4. **Phase 4, AI and themes:** the provider-agnostic AI layer, AI theme creation for the CRM, and the AI helpers.
5. **Phase 5, quotations and proposals:** price list, templates, AI-drafted wording, PowerPoint quotations, PDF proposals, versions and approval.
6. **Later:** lead capture forms, targets and leaderboard, two-factor login, summary emails, automatic backups, WhatsApp reminders.

Decisions

These choices are approved and shape the build.

Topic	Decision
Lead ownership	A consultant can be on several projects. Admin or manager can reassign a lead to another consultant, and every change is logged.
Manager review	Approval is required when a lead moves to Won or Lost, and optional at other stages.
Reminders	In-app notifications and email in the first release. WhatsApp reminders come later.
Quotation approval	The admin sets an amount limit in settings. A quotation above it needs manager approval before it is marked Sent. Off until a number is entered.
AI providers	Start with two free providers in a fixed fallback order (for example Groq, then OpenRouter free models), with Gemini optional. The admin can reorder them in settings.
First release	Phases 1 and 2 first, then analytics, then AI and themes, then quotations and proposals.
Proposal text	The consultant can edit the AI-drafted text before the PDF is created.

To fill in later in admin settings: default payment terms, the web address of the iFleon about page, the price list, and the final logo files.
